第二部份：英翻中 (50%) 請將翻成的中文寫在答題紙上

Anthropology is the science that studies humans, their biology, adaptations, behavior, and variation within the context of a specialized adaptation of learned social behavior called culture. Anthropologists study such broad ranging phenomena as biological and cultural differences among human groups, the structure of the many human languages, the adaptability of human groups to different environmental conditions, the patterns of growth, and the changing patterns of culture over time.
